

## **BAHAMAS AGGRESSOR**

### **Tiger Beach Dive Sites**

**Mount Olympus:** The top of the reef is 45-50 feet, down one side you reach the sand around 95 feet, down the other side it just keep going creating a wonderful wall. Guests could spend all day diving this area and never cover all of Mount Olympus.

**Mini Wall:** This dive site has two mounds running side by side with a small patch of white sand between these mounds covered with marine life. The first of the coral mounds starts around 35 feet and slopes down to around 70 feet. The second mound starts around 40 feet and slopes to about 85 feet. Both mounds as they slope give the look of a small wall.

**Hog Fish:** A shallow dive ranging from 30-45 feet. As you swim along Hogfish Reef you will notice lots of crevices and ledges to look under for small creatures. A garden of soft corals with hard corals covers the top and schools of Grunts, Snappers, Chromis and Angelfish cover the reef. Swimming in the sandy areas just off the reef are large and small Hogfish.

**Shark Paradise:** This beautiful reef received its name from the different types of sharks you can find here at any given time. While enjoying the marine life covering Shark Paradise we have seen, Nurse, Caribbean and Lemon Sharks. Once in a while we even get a beautiful Tiger Shark in the area.

**Fishtail:** Located just to the south of Shark Paradise. Due to its location we sometimes get a chance to see a shark while diving the beautiful reef, which is covered with Gorgonians, Yellow Sea Whips, Sea Plumes, Orange Spiny Sea Rods and Sea Fans. When you can add a mix of hard corals and a variety of lots of tropical fish you have the perfect spot to enjoy.

**Sugar Wreck:** This is one of the crewmembers favorite shallow sites. During the late 1800's a barge carrying molasses sank in 18-20 feet of water in the middle of nowhere on the Little Bahama Bank. Soon fish and other marine life found this to be a great hiding place and soon the wreck was covered with marine life. At any given time we can find the resident Green

Moray Eel, or Nurse Shark and everyone's favorite, the Hawksbill Turtle that comes up close for pictures and video.

**El Dorado:** Starting in 40 feet and sloping towards a sandy bottom around 70 feet, guests will enjoy seeing Lobsters, huge Channel Clinging Crabs, Banded Coral Shrimp and schools of fish. At night Octopus, Squid, Turtles resting, Eels swimming out in the open and an array of hard and soft Corals are seen.

**El Captain:** A huge underwater mound that is covered with Gorgonians and hard corals. Just off to the side are two large pinnacles. The top of the main mound starts around 45-50 feet and the bottom 90 feet. You can easily follow schools of fish or stay in one small area and look for lots of macro and small animal life.

**Tiger Beach:** A beautiful beach area that sits in 15 feet of water. There's a white sandy bottom that seems to always have Sharks. Most of the Sharks seen are Lemon Sharks ranging from 4-7 feet in length. Also seen: Caribbean Reef Sharks, Nurse Sharks and Tiger Sharks.
